

TAKE CONTROL OF YOUR HEALTH WITH THE PREMIUM FOOD SENSITIVITY TEST

Why is it important to take the test?

When food particles enter the bloodstream, your immune system can sometimes identify these food proteins as 'foreign' and produces IgG antibodies to 'attack' the particular food in question.

This response is your immune system's natural defense mechanism to ward off harmful invaders in the body which can create inflammation. This inflammation can then trigger troublesome symptoms, which may persist if they are neglected.

How does it work and what are the benefits?

- Find out whether you have a sensitivity to over 200 food & drink ingredients.
- Simply take a tiny finger-prick blood sample and return in our free-post envelope .
- Optimize your diet & lifestyle knowing which foods you are reacting to.
- This test measures all four subtypes of food-specific IgG.

With support, people suffering from these types of symptoms have been helped by the Premium Food Sensitivity test:

- Headaches
- Migraines
- Bloating
- Wind
- Abdominal pain
- Lethargy
- Tiredness
- Anxiety
- Depression
- Weight gain
- Diarrhea
- Skin problems, like eczema, psoriasis, rashes, itchy skin & hives

WHAT DO THE RESULTS SHOW?

You'll receive clear and easy to understand results with an accompanying guidebook and elimination diet diary.

NEW: This test now includes Reactivity Values, 'scoring' your sensitivity to each of the food & drink ingredients tested, between 0 and 100 for each item.
